Registered tsunami waves in the region of Aegean Sea for the last 5 years

Lyuba Dimova

Department of Meteorology and Geophysics
Faculty of Physics, Sofia University “St. Kliment Ohridski”

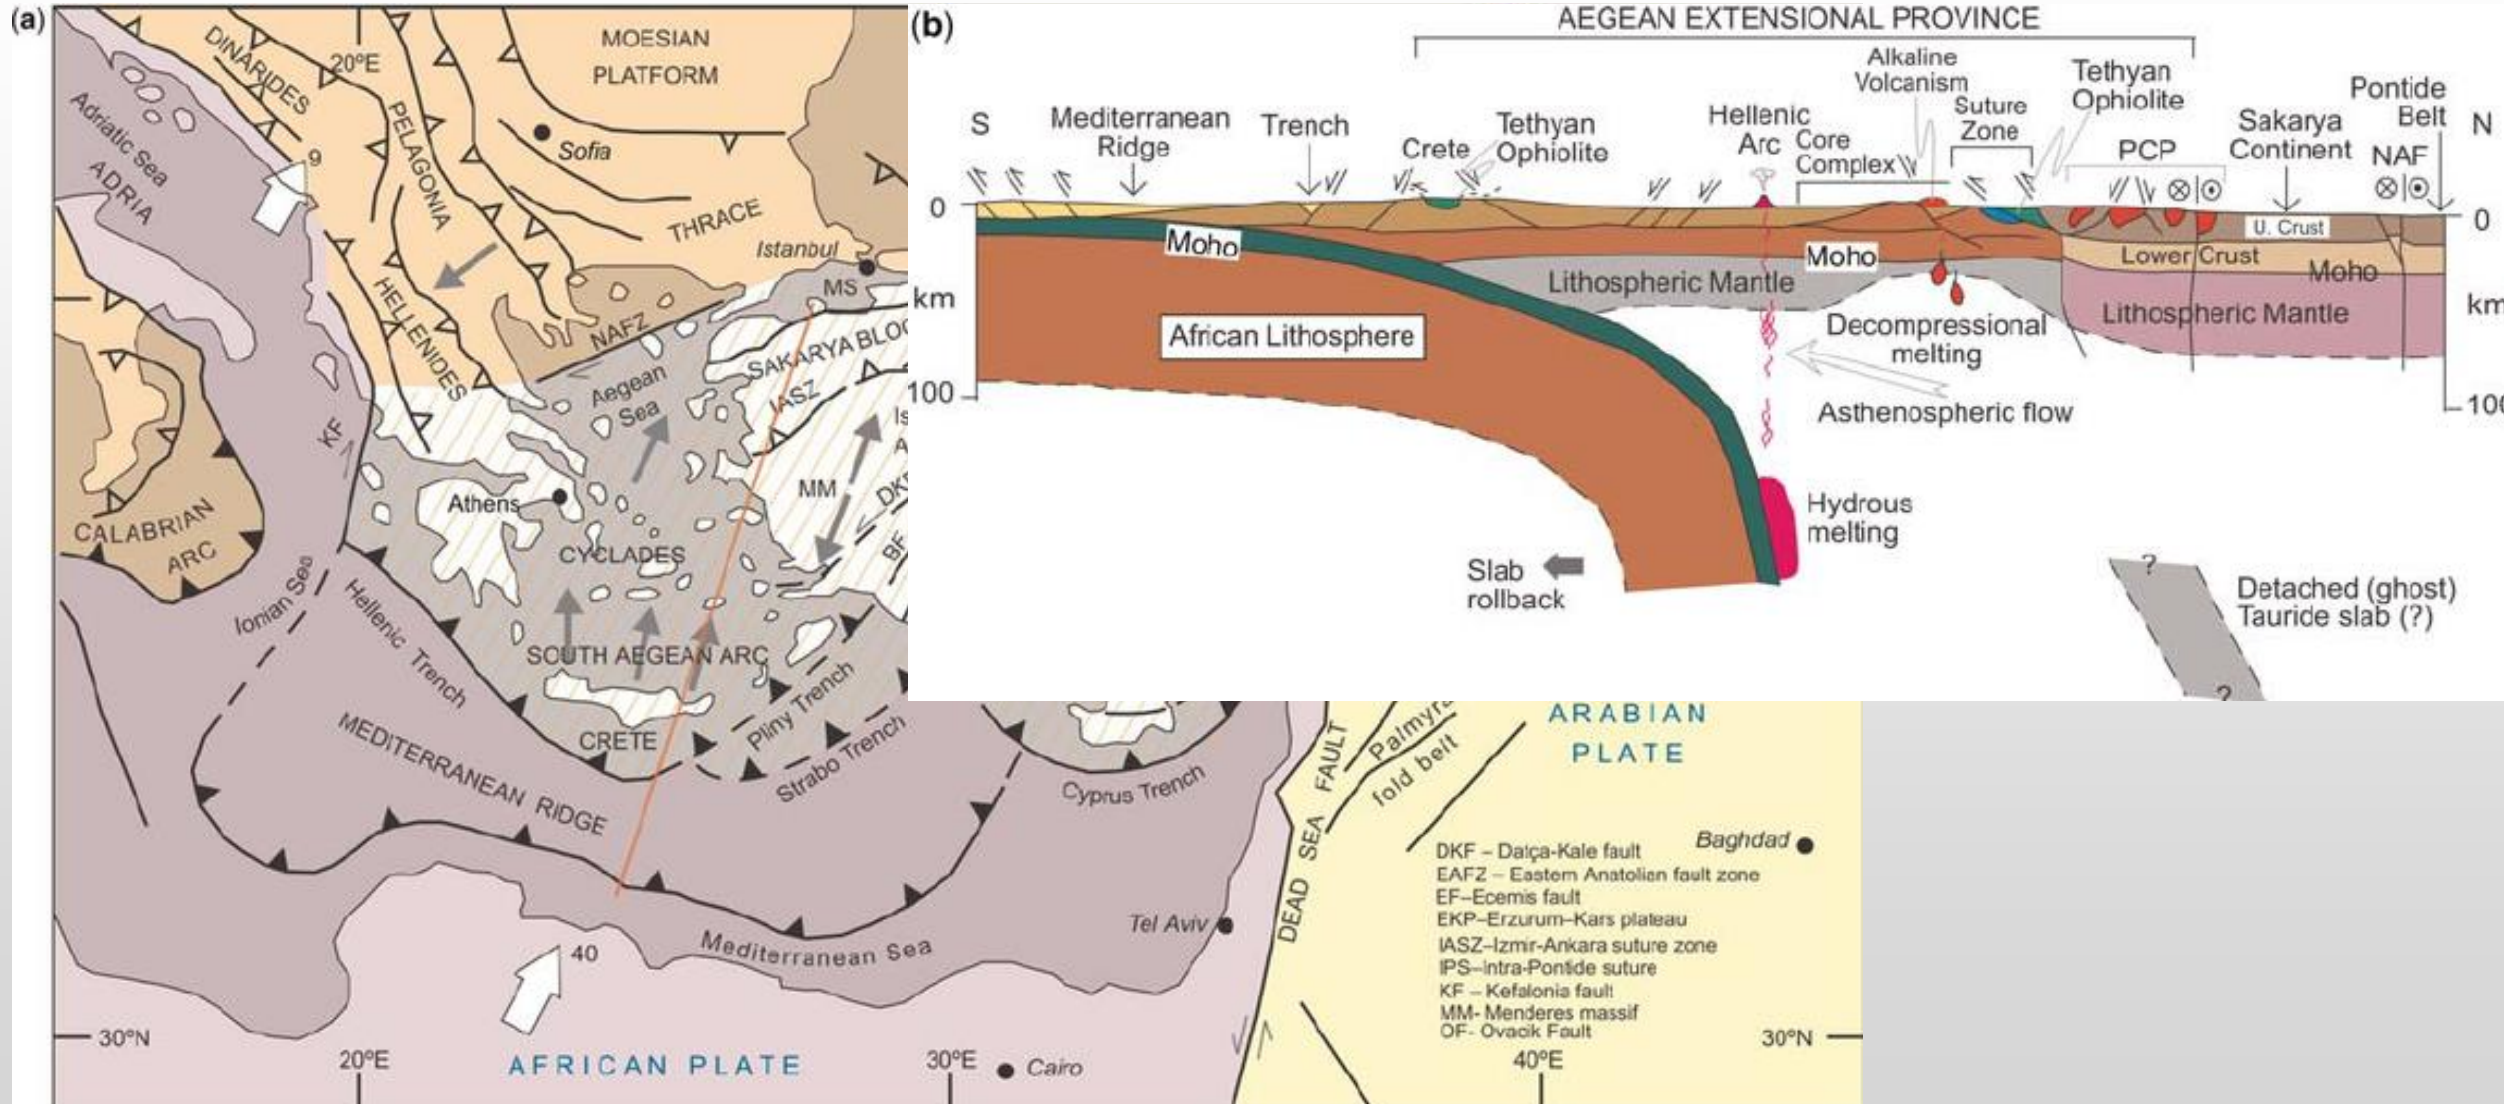

e-mail: lyuba_dimova@phys.uni-sofia.bg

OUTLINE

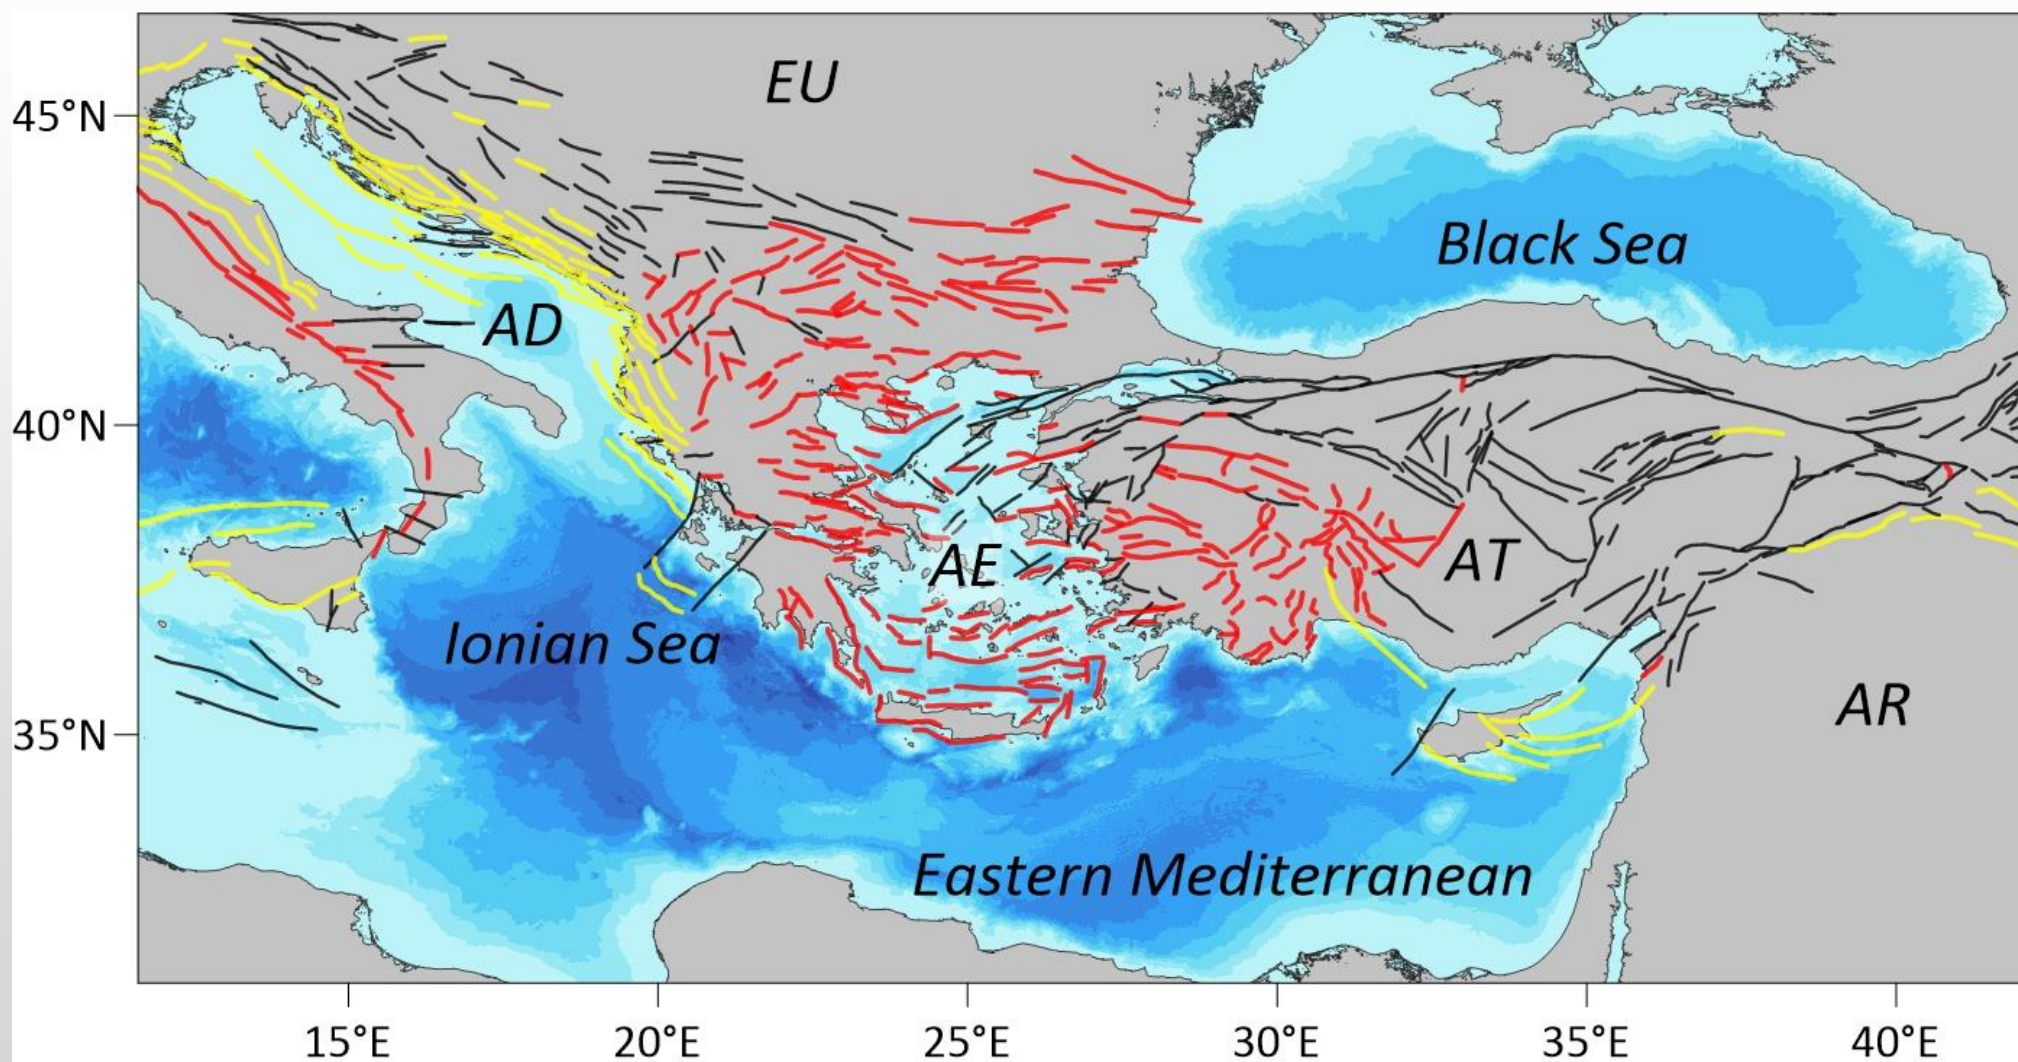

- Overview of tsunami waves, seismic activity and tectonic structures in the Southeast Europe and in the Aegean region
- Registered tsunami waves in the past 5 years
- Tsunami numerical simulations:
 - October 30, 2020 (Samos-Izmir);
 - May 2, 2020 (Crete Island);
 - July 20, 2017 (Bodrum-Kos);
- Conclusions

Southeastern Europe – TECTONIC STRUCTURES

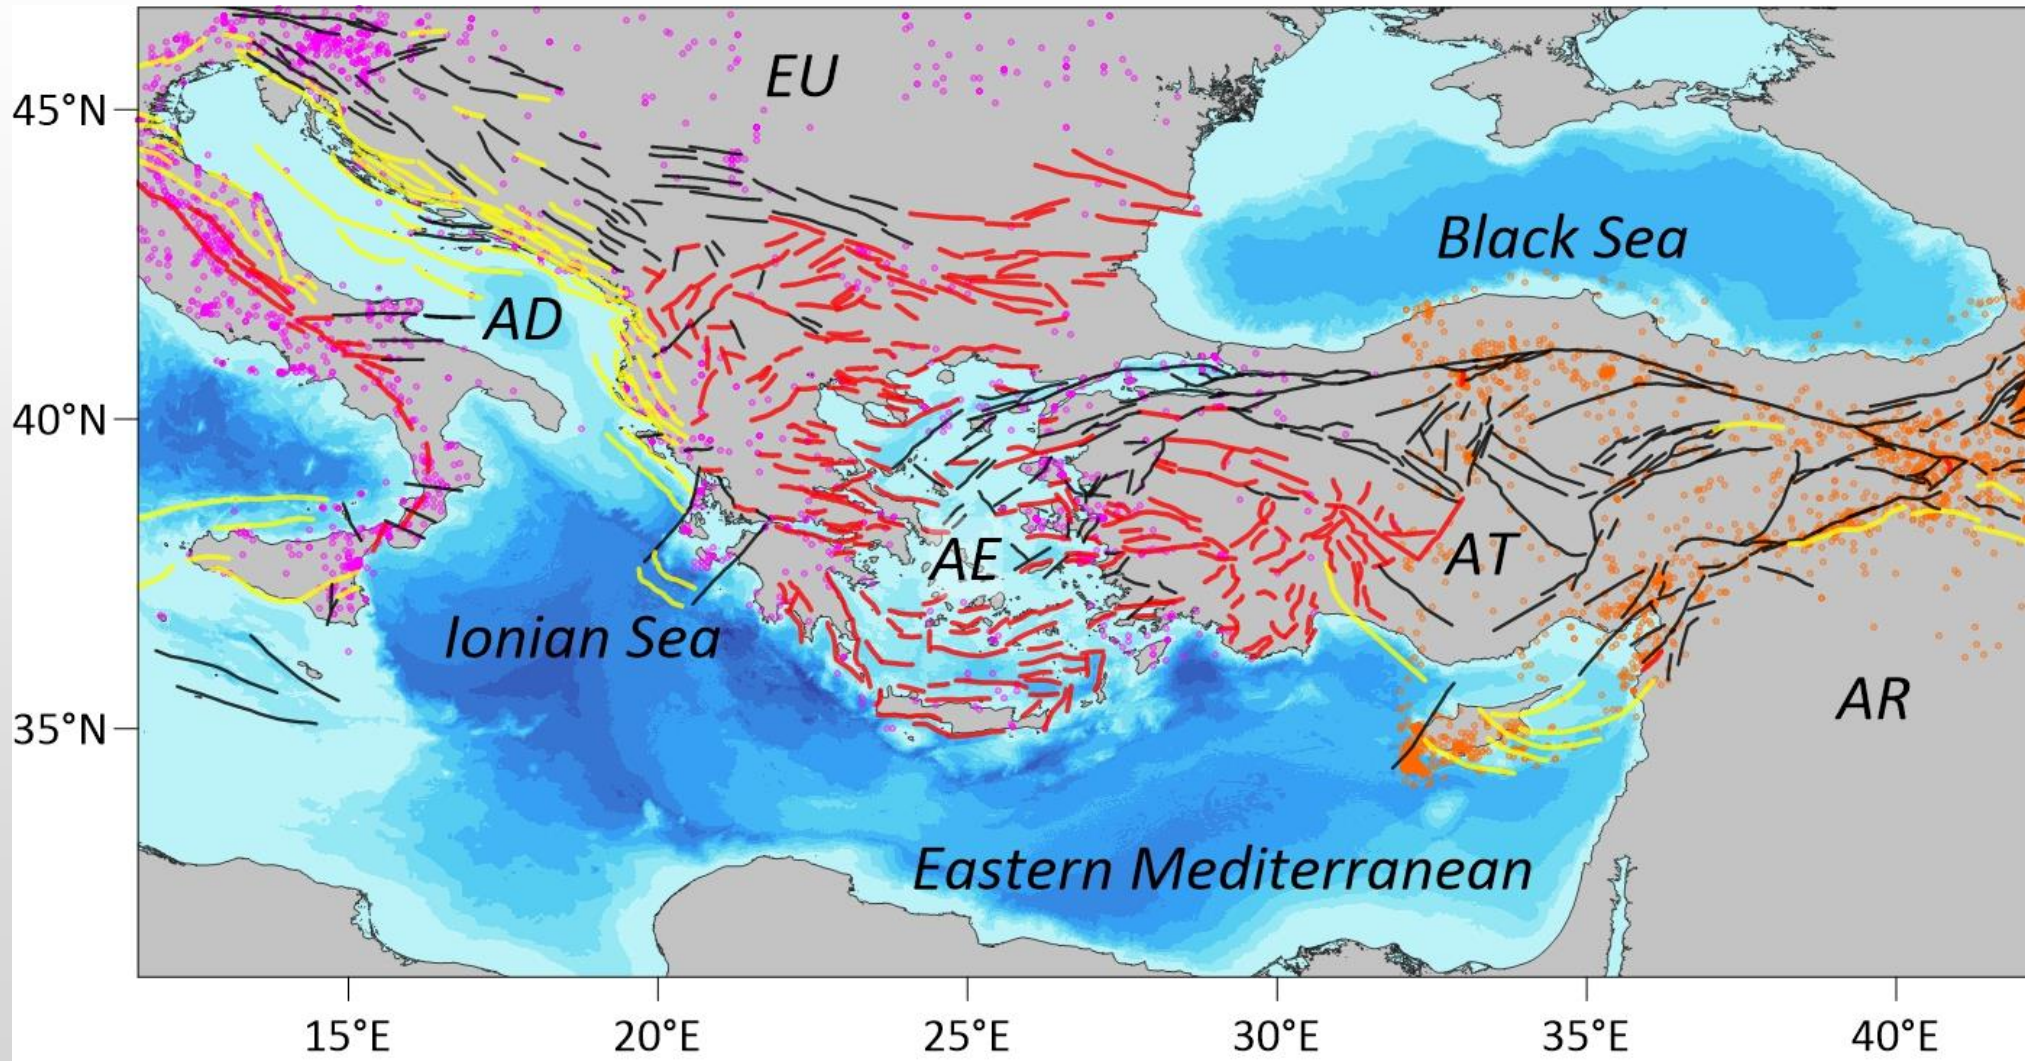

Southeastern Europe – TECTONIC STRUCTURES

Southeastern Europe – SEISMICITY

Seismicity 1000-1899 – data from SHEEC (SHare European Earthquake Catalogue)

Seismicity 1000-2006 – for Central and Eastern Turkey and Cyprus from SHEEC (SHare European Earthquake Catalogue)

Southeastern Europe – SEISMICITY

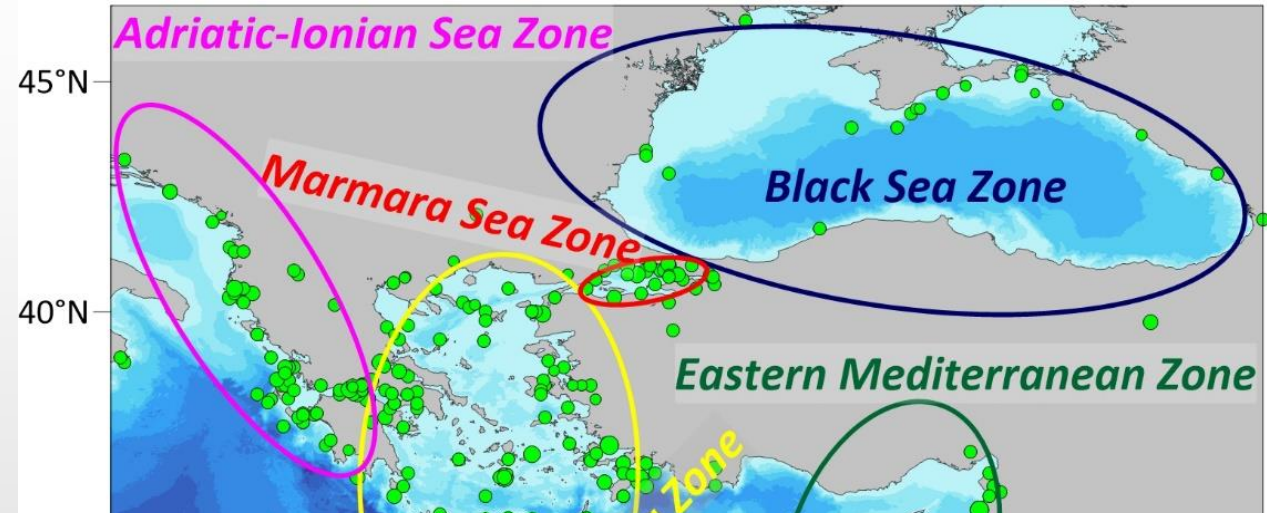

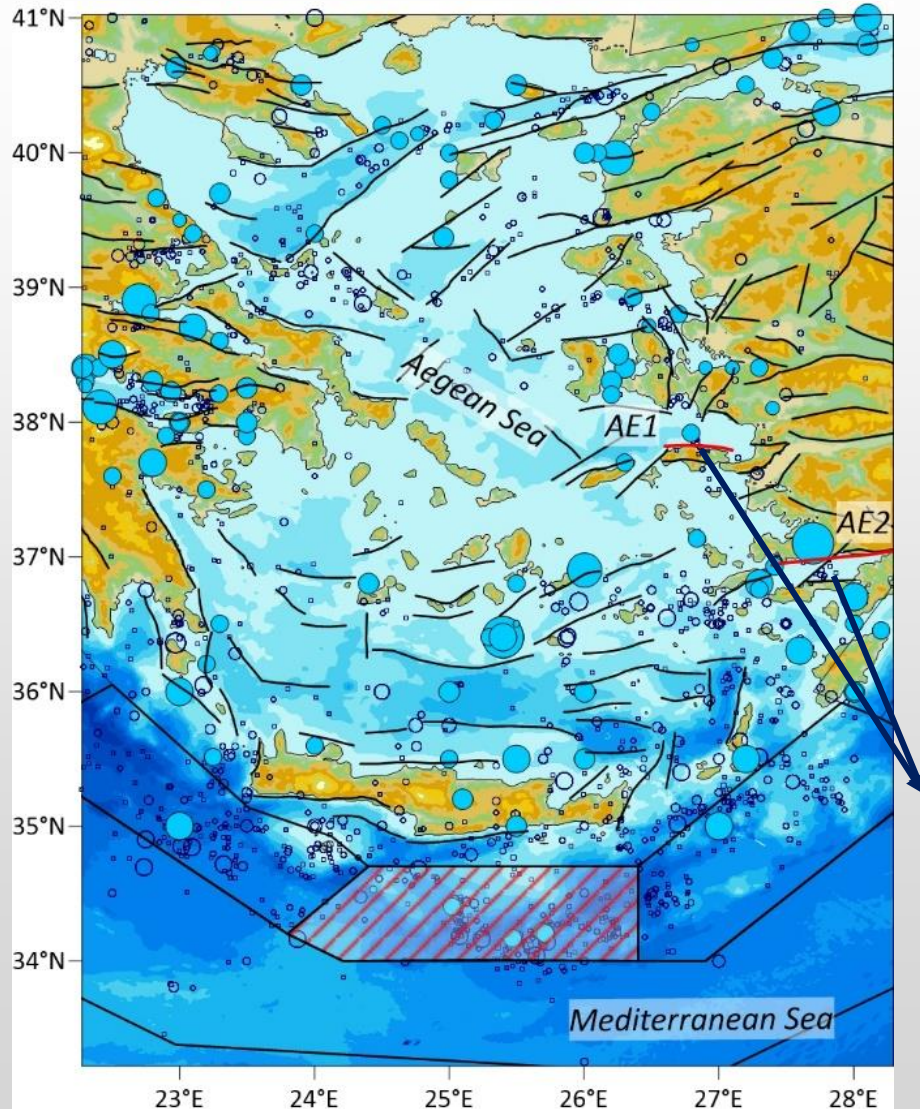

Seismicity 1000-1899 – data from SHEEC (SHare European Earthquake Catalogue)

Seismicity 1000-2006 – for Central and Eastern Turkey and Cyprus from SHEEC (SHare European Earthquake Catalogue)

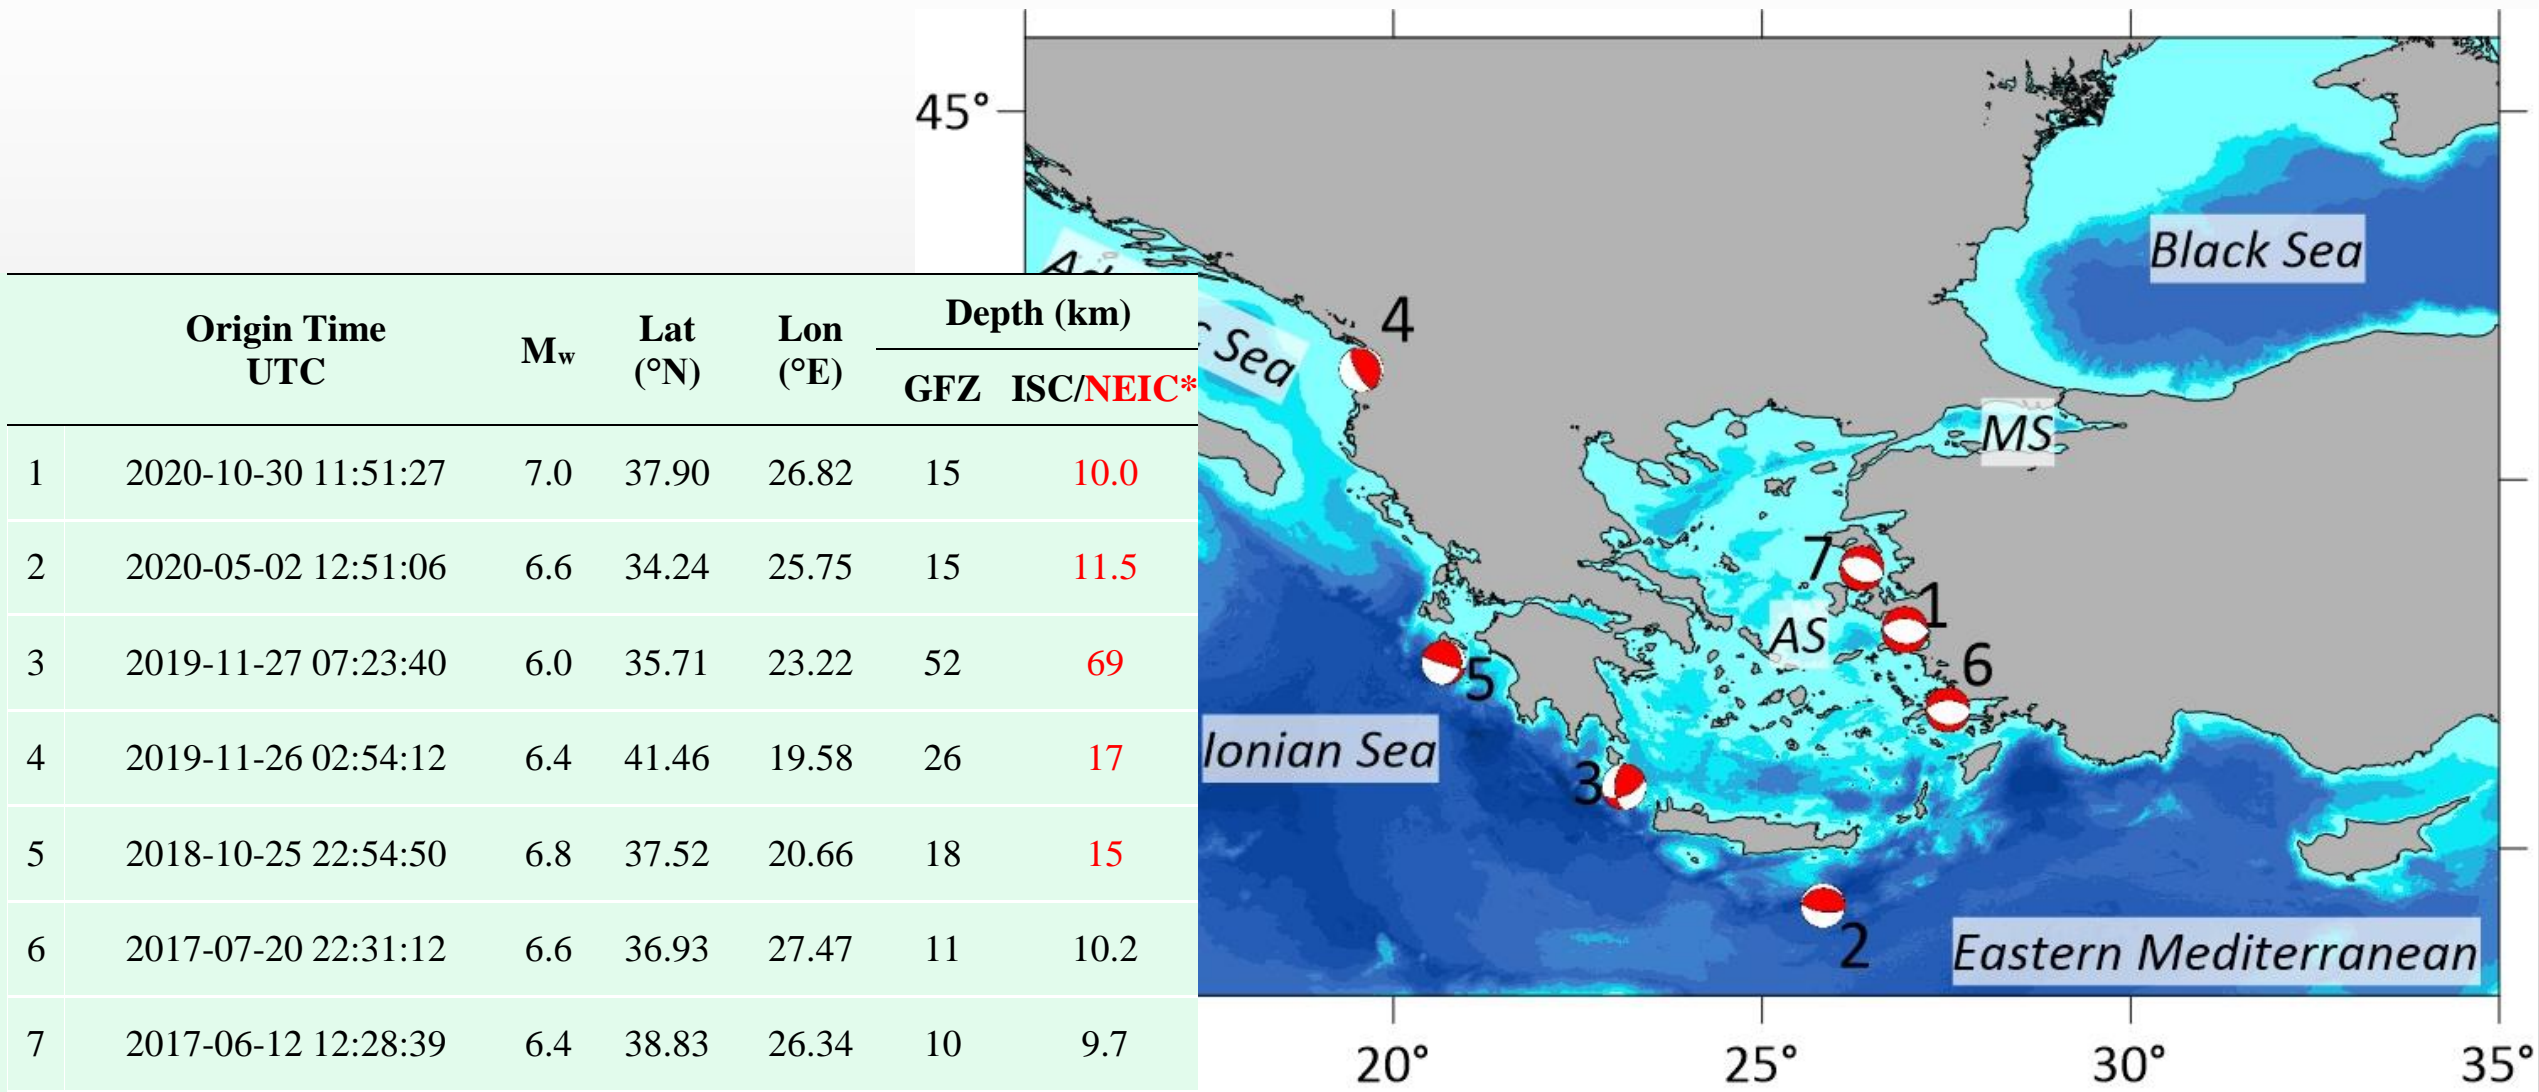

Seismicity 1900-2021 – data from ISC catalogue

Eastern Mediterranean – TSUNAMI SOURCES

ID Source	Type	Strike	Dip	Rake	Length	Width	Depth	Slip rate mm yr ⁻¹	Moment Magnitude		
									Mw Orig	Mw min	Mw max
AE1 GRCS912	NN	260- 290	45- 70	260- 280	44.3	18.0	0.5- 15	0.1-2.0	6.9	6.69	6.98
AE2 TRCS913	NN	70-85	50- 75	260- 290	84.3	17	0- 14.5	0.5-3.0	7.09	6.64	7.08

STRONG OFFSHORE EARTHQUAKES

RECENT TSUNAMI WAVES IN THE AEGEAN SEA

30 October 2020 M7 (Samos-Izmir)

3.8 m max run-up

155 observed run-ups

118 deaths due to the earthquake

1054 injuries

>400 million \$ total damage

Vathy (Samos).
Security camera

2 May 2020 M6.6 (Crete)

0.35 m max run-up,

7 observed run-ups

The tsunami was recorded in
Alexandria tide-gauge

20 July 2017 M6.6 (Bodrum-Kos)

1.9 m max run-up

40 observed run-ups

1 casualty due to tsunami

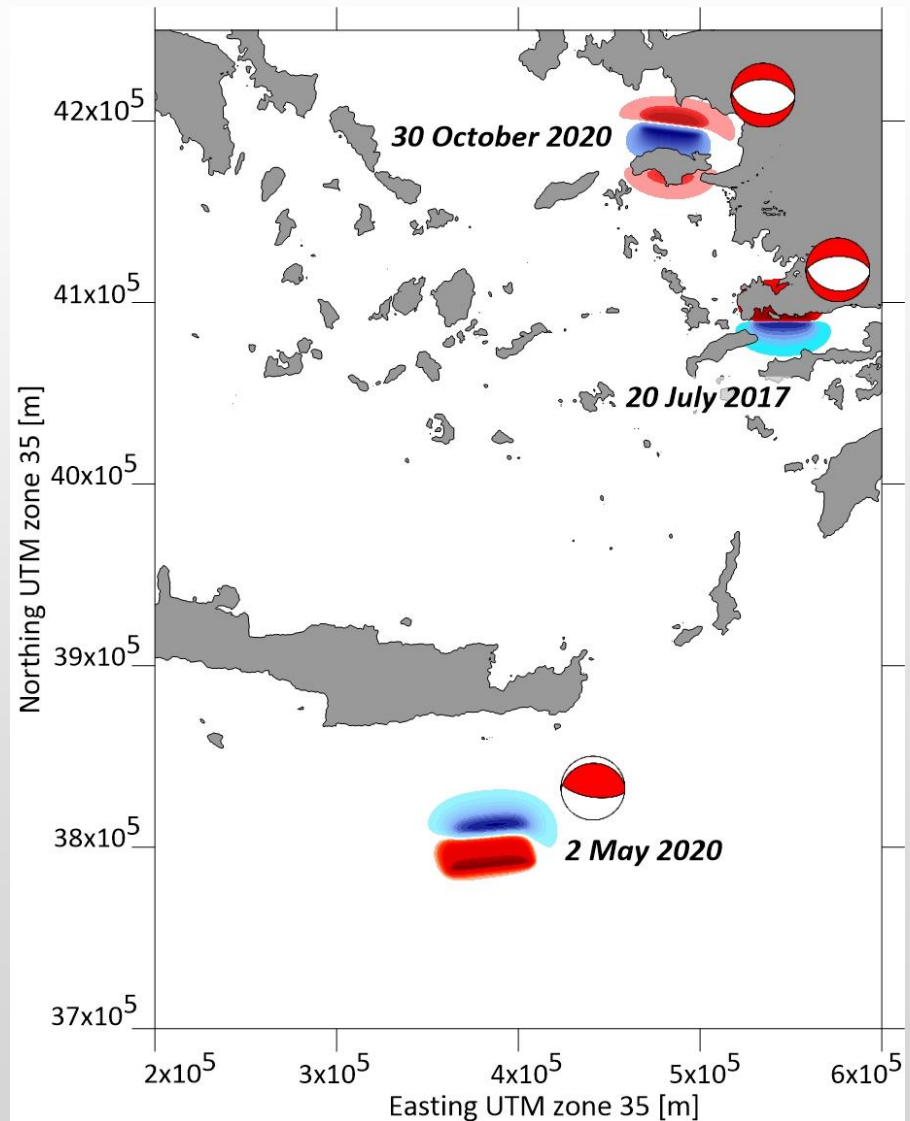

500 injuries

less than 1 million \$ total damage

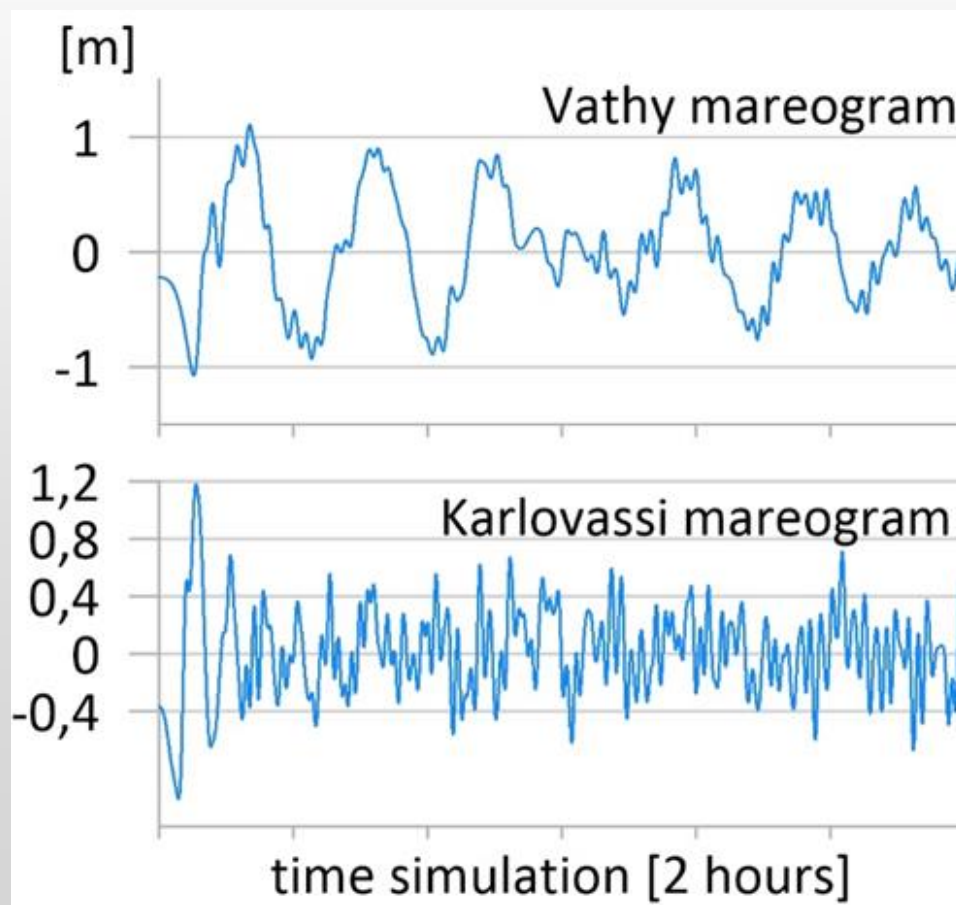

- Assessment of the strong earthquakes induced tsunami;
- Tsunamigenic source selection;
- Focal mechanism determination;
- Preparation of the geometry of the faults;
- Building the computational grids (bathymetry and topography data);
- Initial conditions for tsunami generation (Okada`s method [1985]);
- Tsunami propagation and inundation (UBO-TSUFD model [Tinti & Tonini, 2013])

INITIAL TSUNAMI CONDITIONS

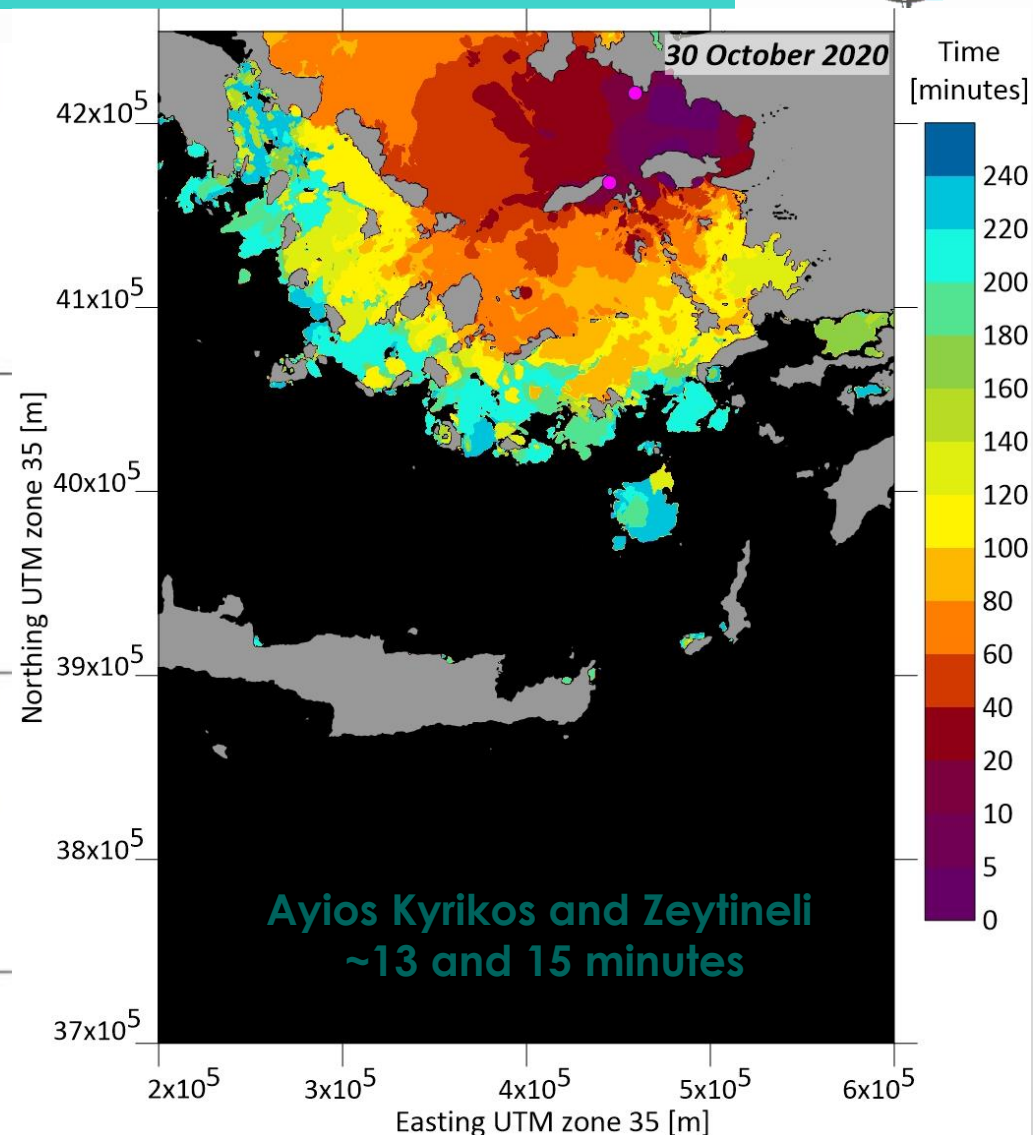

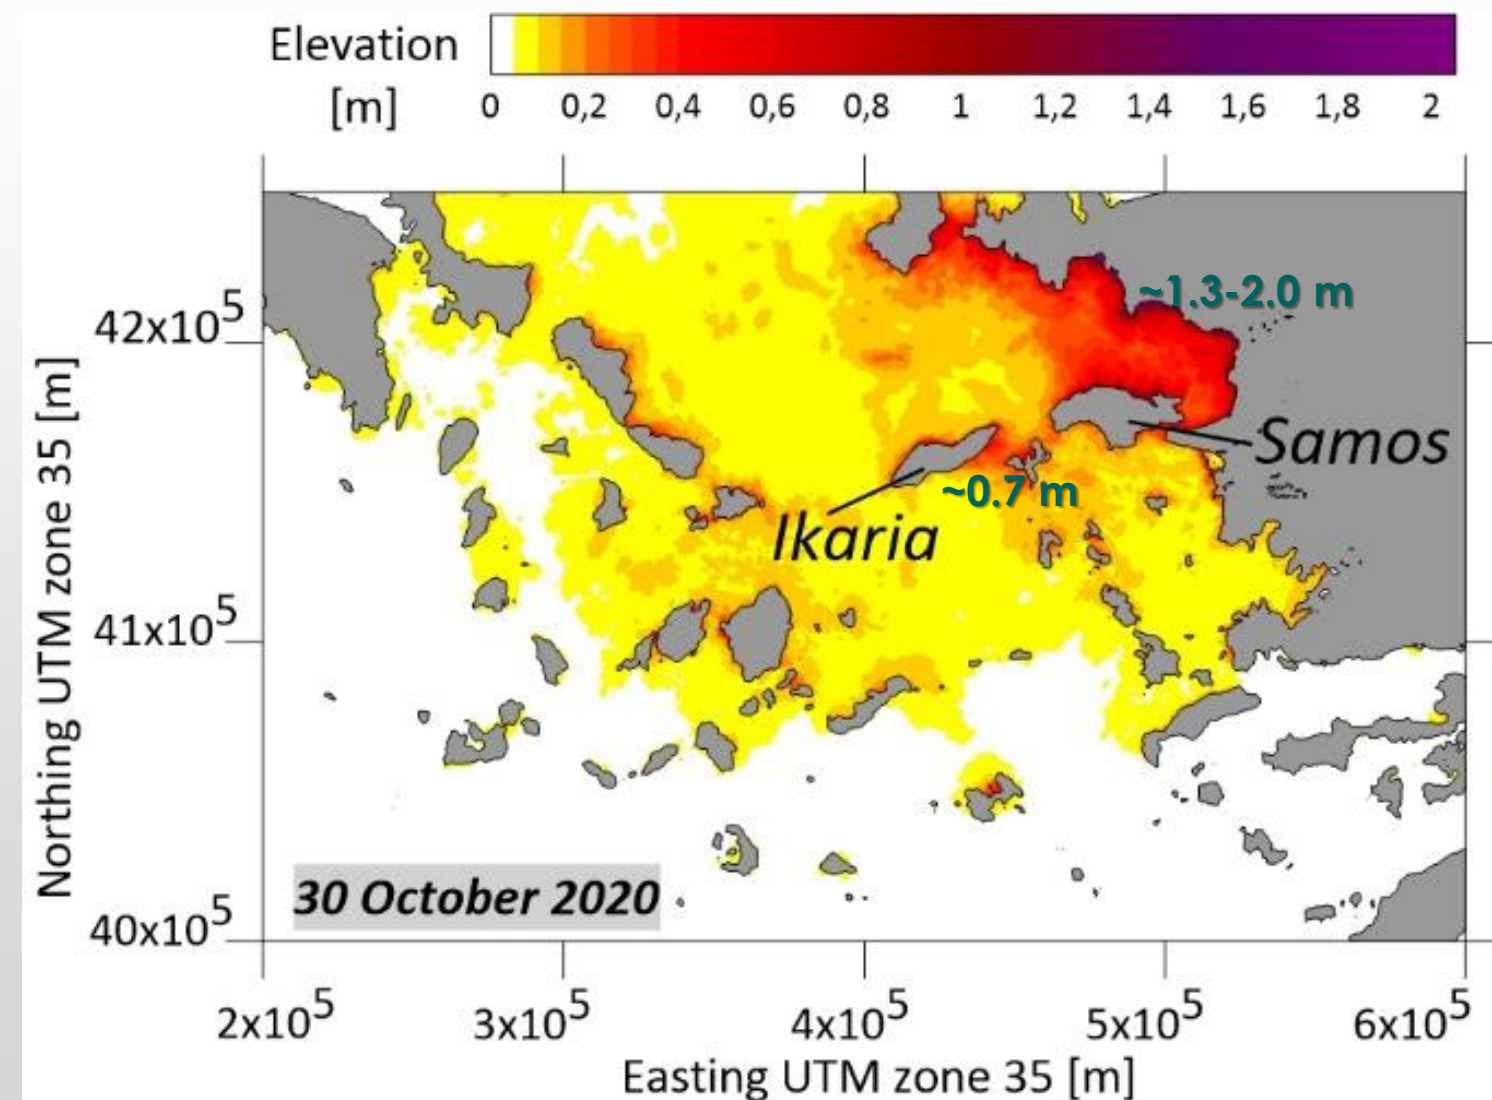

Measured tsunami heights
Karlovassi $h \sim 1.7$ m, receding
Vathy, 2 strong waves $T \sim 20$ min

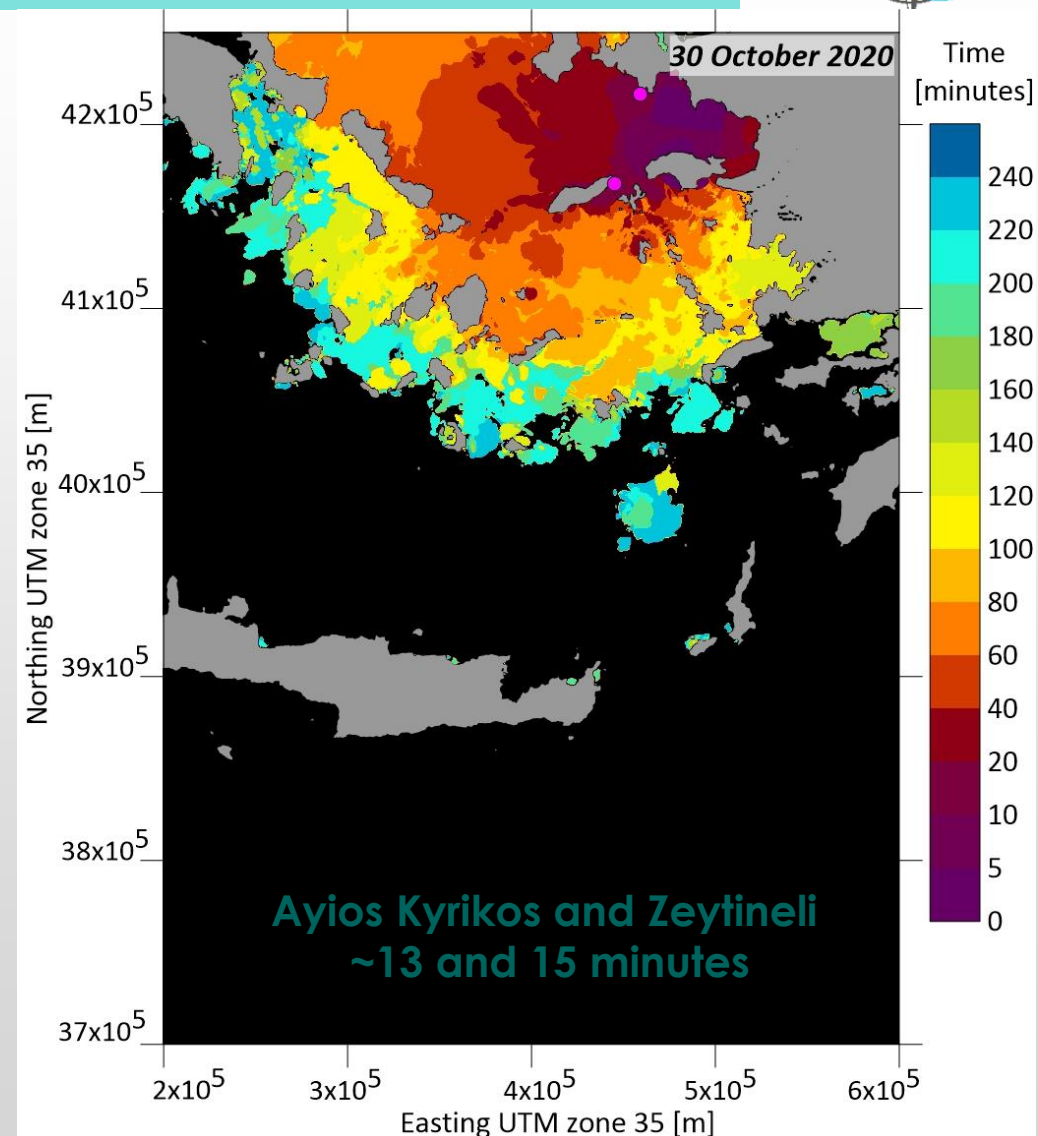

TSUNAMI PROPAGATION FIELD | 30.10.2020

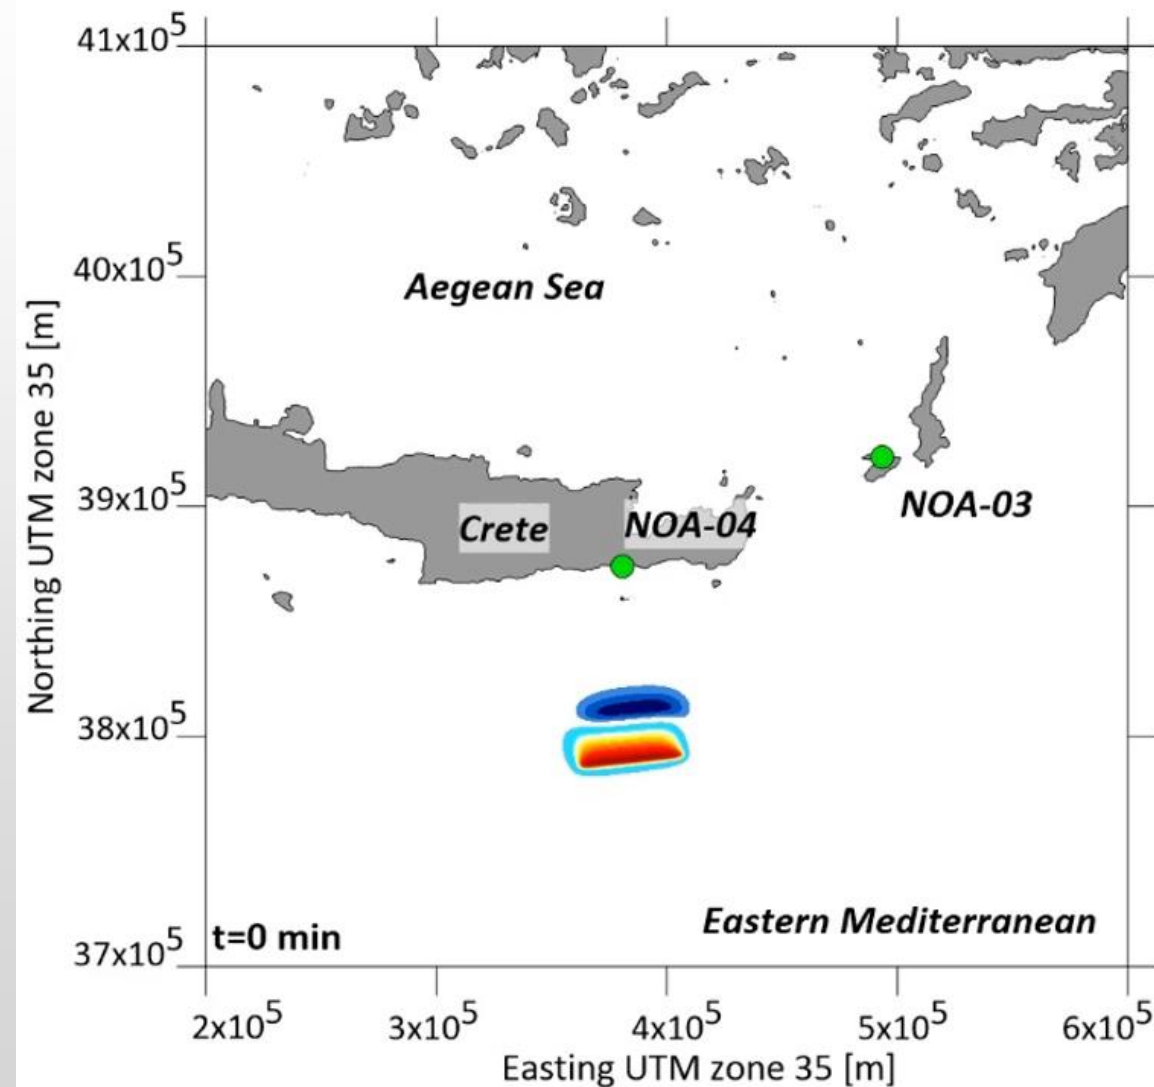

MAXIMUM ELEVATIONS TSUNAMI TIME TRAVEL

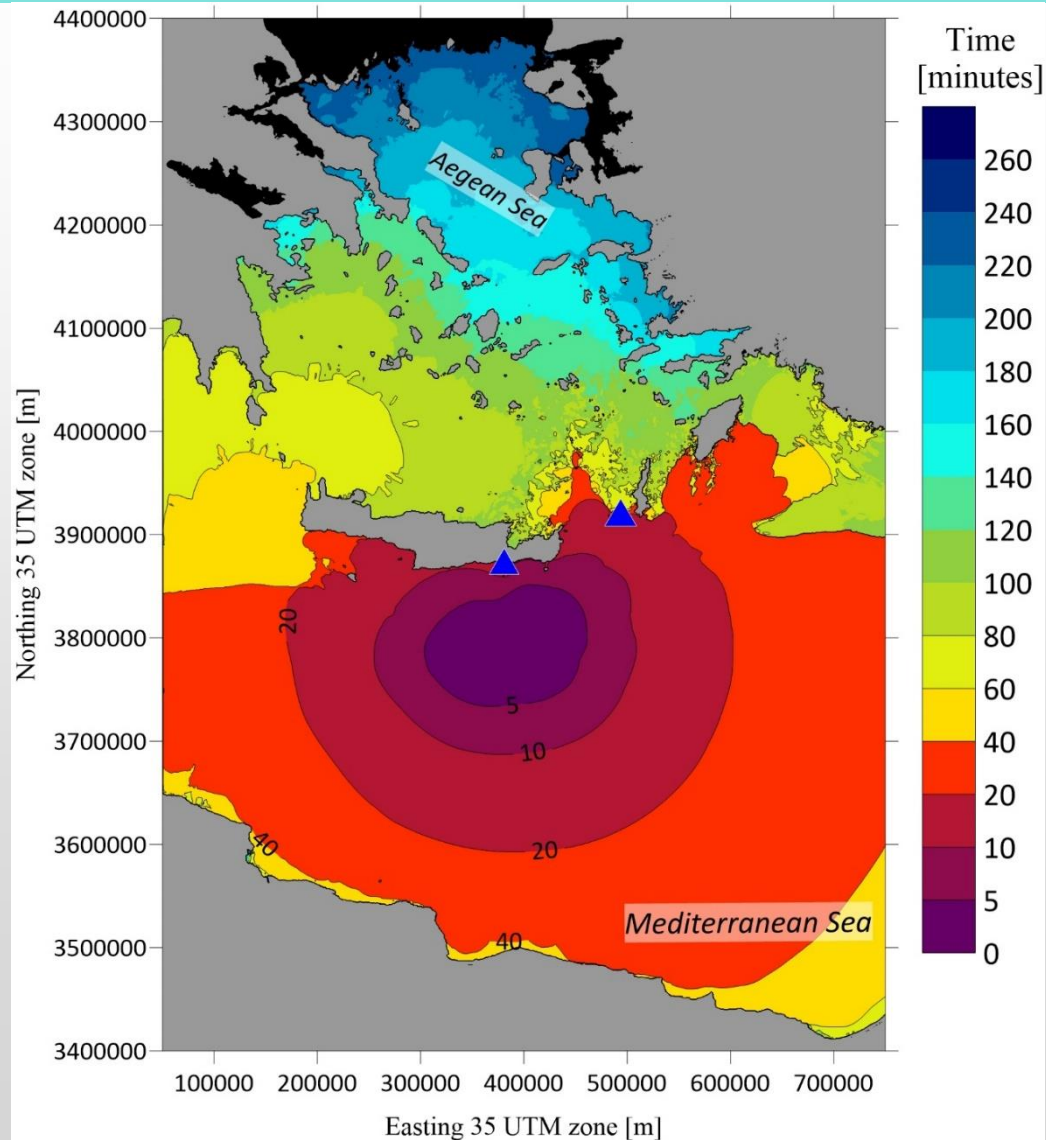

SYNTHETIC MAREOGRAMS | 30.10.2020

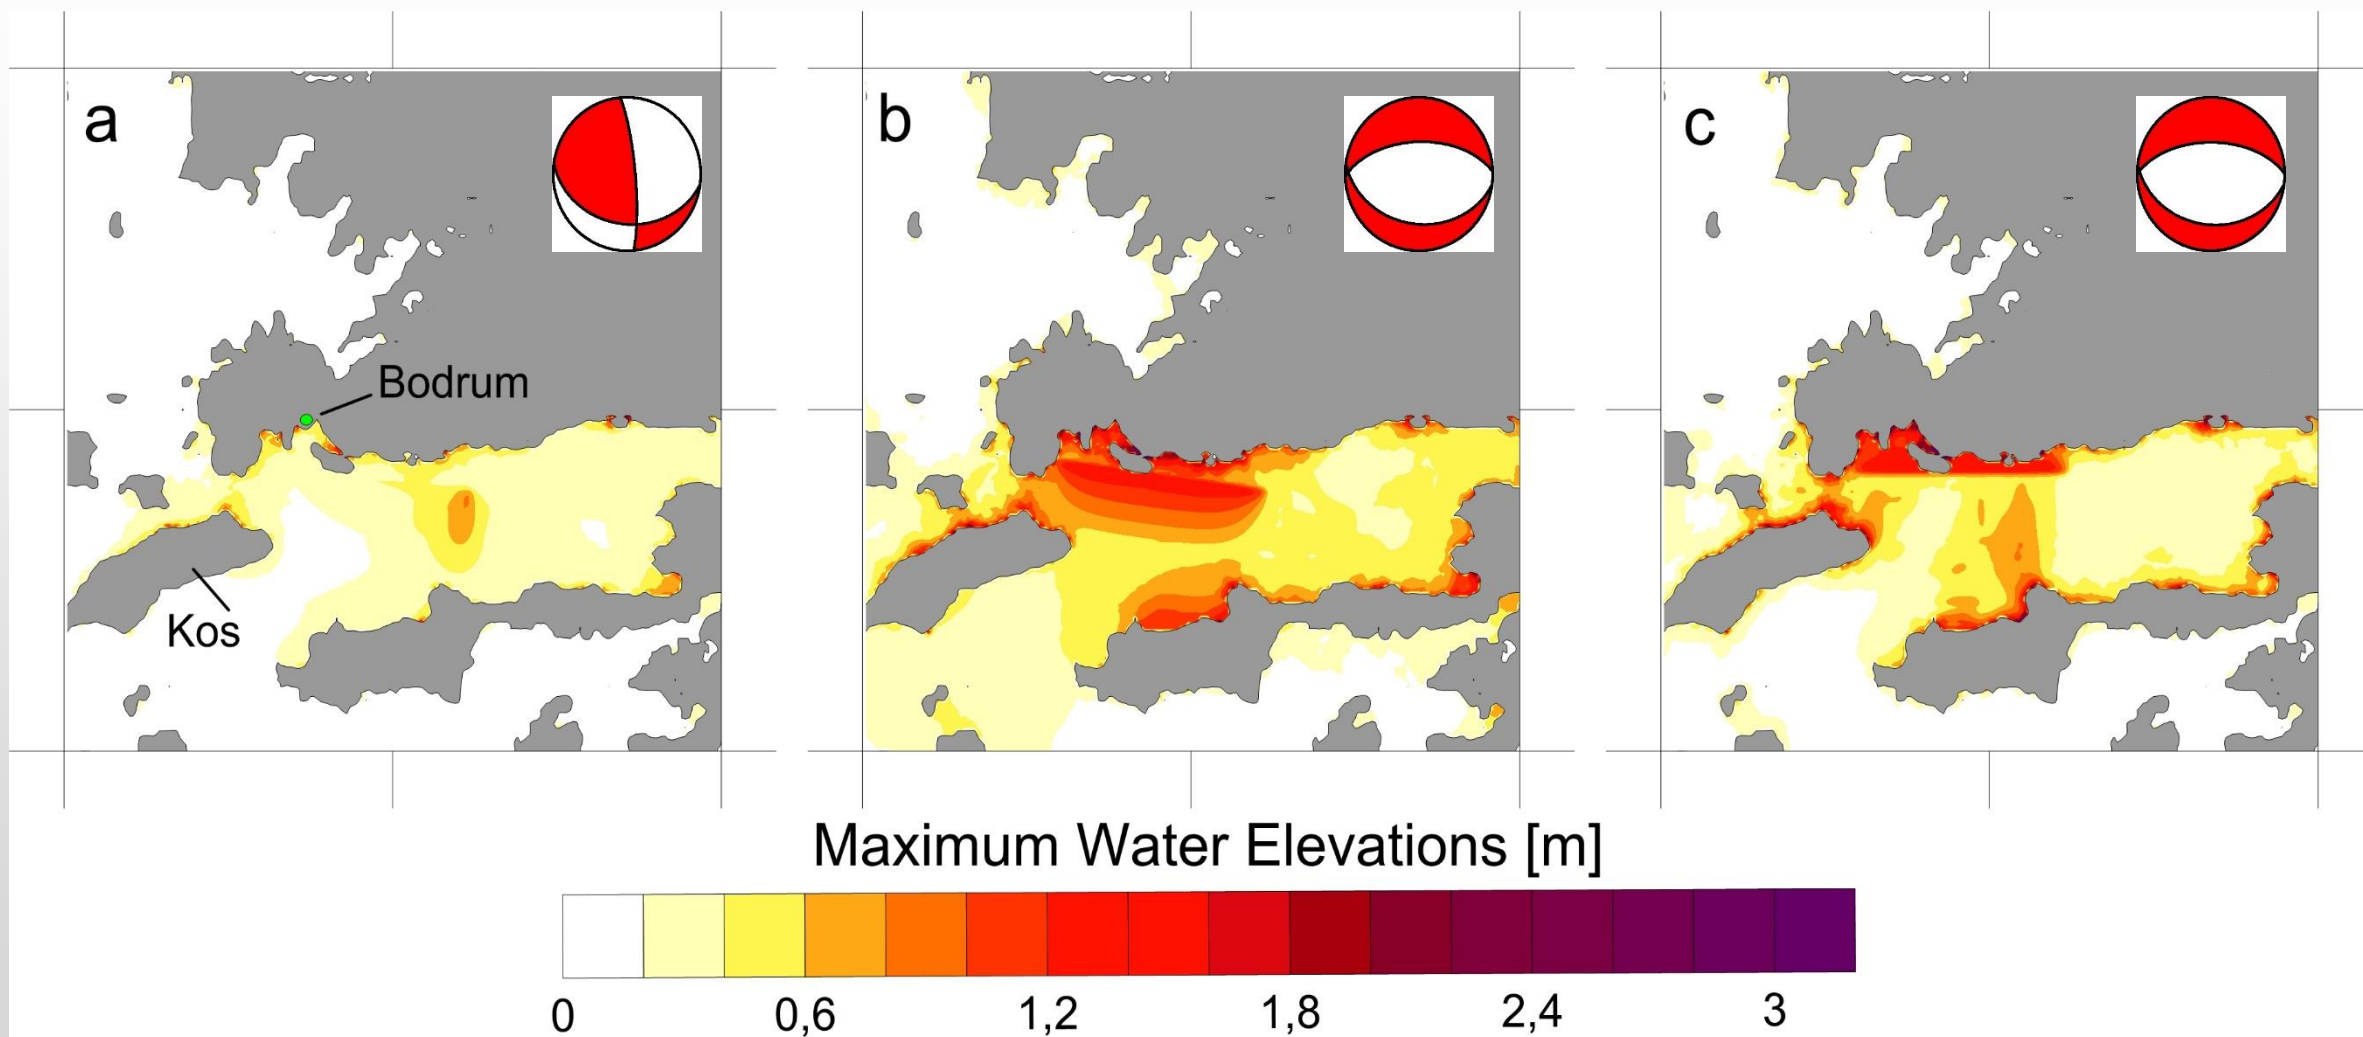

TSUNAMI PROPAGATION FIELD | 2 MAY 2020

TSUNAMI TIME TRAVEL | 2 MAY 2020

MAXIMUM TSUNAMI ELEVATIONS | 20.07.2017

CONCLUSIONS

- Review of the tsunami waves, seismic activity and tectonic structures in the broad Eastern Mediterranean;
- Tsunami numerical simulations have been performed for three recently registered tsunami: 30 October 2020, 2 May 2020 and 20 July 2017;
- Tsunami maximum elevation fields and tsunami time travel maps were build and compared to the observations;
- Better resolution of the computational grid would contribute to estimate the inundation line and the run-up.
- The October, 2020 Samos-Izmir earthquake and tsunami, together with the July 2017 Bodrum-Kos and May 2020 Crete tsunamis, once more reminded us about the considerable tsunami potential in the Eastern Mediterranean.
